VISY-Stick
The level and environmental sensor based on the magnetostrictive measuring principle

VISY-Stick is a level and environmental sensor that has been specially designed to offer high-precision volume and leakage monitoring.

Function
The VISY-Stick sensor operates in accordance with the magnetostrictive measuring principle. The probe tube contains a wire made of magnetostrictive material. Magnets integrated in the floats magnetise the wire at the float position. The sensor electronics transmit current pulses through the wire, which generate a circular magnetic field. A torsional wave develops at the point where the two magnetic fields overlap and it propagates towards the probe head. In the probe head, these waves are converted into an electrical signal. The float positions and the temperature are calculated from the different propagation times.

Design
A VISY-Stick comprises:
» Stainless steel sensor housing
» Stainless steel probe tube
» Brass screw-in unit (height adjustable)*
» Stainless steel product float
» Stainless steel water float

Features of the FAFNIR technology
- High-precision sensors based on the magnetostrictive measuring principle
- Detects product filling level, product temperature and water level
- All wetted parts are made of high-quality stainless steel
- Maintenance-free
- Permanent self-diagnostics
- Also suitable for AdBlue
- Optional: with 1” floats and screw-in unit
- Wireless link to VISY-Command supported

* for use in AdBlue, the screw-in unit is made of stainless steel

VISY-Stick Advanced
The high-precision level and environmental sensor based on the magnetostrictive measuring principle

The VISY-Stick Advanced level sensor is ideal for applications that demand maximum precision and is also suitable for detecting tank leaks.

Function description
The VISY-Stick Advanced sensor operates in accordance with the magnetostrictive measuring principle. The probe tube contains a wire made of magnetostrictive material. Magnets integrated in the floats magnetise the wire at the float position. The sensor electronics transmit current pulses through the wire, which generate a circular magnetic field. A torsional wave develops at the point where the two magnetic fields overlap and it propagates towards the probe head. In the probe head, these waves are converted into an electrical signal. The float positions are calculated from the different propagation times. For precision temperature measurements, the sensor tube of the VISY-Stick Advanced contains temperature sensors.

Features of the FAFNIR technology

- Detects product filling level, water level, and temperatures at multiple points along the measurement length
- Precise gauging of product temperature by means of temperature sensors
- Detects even the most minimal of level changes
- Wireless link to a VISY-Command RF possible
- Certificates: CPA, EPA, OIML

VISY-Density
The highly accurate density measuring module

The VISY-Density module is designed for the measurement of fuel densities. It can be mounted on the VISY-Stick Advanced sensor without the need to install an additional sensor. In combination with the density module the VISY-Stick Advanced provides accurate information about the product filling level, water level, product temperature and product density in the tank.

Function description
Inside the VISY-Density module* the buoyancy of a displacer is measured (Archimedean principle). It provides precise information as to whether fuel in the tank is in conformity with legal and in-house standards. Any changes and deteriorations of the product quality can be measured and alarms can be configured in VISY-Command. The tank level gauging and VISY-Density combination will enable you to control and manage your valuable wet stocks in every respect.

* Patents pending

Features of the FAFNIR technology
- Continuous and hysteresis free density measurement
- Function in conjunction with the level sensor VISY-Stick Advanced
- Compact design
- Quality control of fuels
- Recognition of water containing sump fluids in ethanol blends
- Determination of water content in E85 to E100 fuels

  Stainless steel
VISY-Stick Flex
The flexible level and environmental sensor based on the magnetostrictive measuring principle

VISY-Stick Flex is a level sensor which is especially designed for bulk storage tanks.

**Function description**
The VISY-Stick Flex sensor operates according to the magnetostrictive measuring principle. A wire made of magnetostrictive material has been integrated into the flexible corrugated hose. The special design of the sensor allows the sensor body to be bent. So the VISY-Stick Flex can be packed compactly and shipped at low cost. Another advantage is the easy installation. A weight at the lower end of the sensor stretches it out to its full length, and a magnet placed below the weight secures the sensor to be in place. When the magnet is in contact with the bottom of the tank (after installation) any unintentional movement of the VISY-Stick Flex is avoided. When the installation of the VISY-Stick Flex level sensor has been completed, the corrugated hose is positioned vertically and both the product and the water float can freely move up and down.

**Features of the FAFNIR technology**

- High-precision sensor based on the magnetostrictive measuring principle
- Detects product filling level, product temperature and water level
- Sensor length up to 15 meters
- Compact packaging and easy transport thanks to the corrugated tube
- Weight at end of sensor guarantees vertical installation
- Lower end of the sensor held in place by a magnet
- Installation in tanks with low ceiling height possible
- Easy installation
- Installation in 1½” process connection possible
- Wireless link to a VISY-Command RF possible
- Maintenance-free

VISY-Stick LPG
The level sensor for liquefied petroleum gas based on the magnetostrictive measuring principle

The VISY-Stick LPG level sensor supplies information about the fuel levels in LPG tanks. The magnetostrictive sensor with buna float and pressure-resistant stainless steel screw connection is specially designed for use in liquefied petroleum gas.

Function
The VISY-Stick LPG sensor operates in accordance with the magnetostrictive measuring principle. The probe tube contains a wire made of magnetostrictive material. A magnet integrated in the float magnetises the wire at the float position. The sensor electronics transmit current pulses through the wire, which generate a circular magnetic field. A torsional wave develops at the point where the two magnetic fields overlap and it propagates towards the probe head. In the probe head, these mechanical waves are converted into an electrical signal. The float positions and the temperature are calculated from the propagation time.

Features of the FAFNIR technology
- Magnetostrictive sensor for use in liquefied petroleum gas (buna float, pressure-resistant stainless-steel screw connection)
- Continuous monitoring of product level and product temperature
- Also available with a 1” float
- Two installation versions: direct installation or installation with installation kit

Dimensions in mm
Variable LPG installation kit

The variable LPG installation kit comprises a jacketed pipe with special LPG float and a cutting ring fitting with ¾" NPT external thread.

Function description
The installation length of the variable LPG installation kit can be adjusted. The exact installation dimensions do not need to be known for this installation. The attachment to the process connection of the tank is done with a cutting ring fitting which is movable on the jacketed pipe and can be adapted to the tank diameter. If necessary, the length of the jacketed pipe can be cut on-site.

After fixing the installation kit, the level sensor is simply slid into the jacketed pipe and attached. Now, the level sensor is not in the pressurised chamber and can be replaced at any time without releasing the pressure in the tank.

Features of the FAFNIR technology
- Adjustable installation length
- One-time emptying of the tank during the installation
- No prior knowledge of exact installation length required
- Significant cost savings
- Can be cut on-site
- Easy installation
- Material: Stainless steel, buna
- Maintenance-free
VISY-Stick Interstitial
The leakage sensor for double-walled tanks based on the magnetostrictive measuring principle

The VISY-Stick Interstitial is a sensor for installation in the intermediate chamber and is designed to guarantee rapid leak detection. It is used in double-walled tanks whose intermediate chambers are filled with a leak detection fluid (e.g. brine, glycol, etc.). An alarm is issued from VISY-Command if the fluid level in the intermediate chamber leaves a specified range.

Features of the FAFNIR technology

- Continuous monitoring of the fluid level
- VISY-Command gives instant alarm in the event of a leak
- Easy and cost-effective to install and commission

Function
The VISY-Stick Interstitial sensor operates in accordance with the magnetostrictive measuring principle. The probe tube contains a wire made of magnetostrictive material. A magnet integrated in the float magnetises the wire at the float position. The sensor electronics transmit current pulses through the wire, which generate a circular magnetic field. A torsional wave develops at the point where the two magnetic fields overlap and it propagates towards the probe head. In the probe head, these waves are converted into an electrical signal. The float position is calculated from the propagation time.

VISY-Stick Interstitial
VISY-Stick Sump
The sensors for manhole and dispenser sumps based on the magnetostrictive measuring principle

The VISY-Stick Sump sensors are used to monitor the manhole sump and the sump underneath the dispenser for fluids that could potentially accumulate there. They are capable of distinguishing between water and fuel rapidly and accurately.

Function description
The VISY-Stick Sump sensor operates in accordance with the magnetostrictive measuring principle. The probe tube contains a wire made of magnetostrictive material. Magnets integrated in the floats magnetise the wire at the float position. The sensor electronics transmit current pulses through the wire, which generate a circular magnetic field. A torsional wave develops at the point where the two magnetic fields overlap and it propagates towards the probe head. In the probe head, these waves are converted into an electrical signal. The float positions are calculated from the different propagation times. When necessary the water level, fuel alarm or tamper alarm are reported.

Features of the FAFNIR technology
- Continuous monitoring of the water or fuel level in the manhole sump and dispenser sump
- Alarm in the event of fuel and/or water being detected
- Encapsulated design for protection against contamination
- Anti-Tamper device
